OPERATION CRITICAL WIRELESS PORTFOLIO

WIRELESS EARPIECE

- Exceptional audio for hearing in high noise environments
- Very comfortable and secure fit for long shifts
- 1 length available for custom fit (30cm)
- 12 hours (5/5/90) battery life

WIRELESS EARBUD – Q2 2012

- Simple, discreet, professional design for businesses
- In-line microphone for convenient transmissions in high noise environments
- 2 lengths available for custom fit (30cm or 110cm)
- 12 hours (5/5/90) battery life

WIRELESS PTT

- Supports both earpiece solutions
- Ideal for discrete operations – place in your hand or in your pocket
- Wireless PTT solution for commercial Bluetooth headset (HK200 or similar)

Recommend HK200 or similar commercial Bluetooth Headset

- Cost-effective off-the-shelf solution
- PTT must be done on radio or with wireless PTT
- 8 hours (5/5/90) battery life

WIRELESS BUILT IN

- **Reliable wireless communication**
- **Class II device - upto 10 metre operational range**
- **Intuitive menu pairing procedure**
- **Volume control using radio vol. control or use headset volume buttons.**
- **Easy switching between radio speaker and wireless earpiece**
 - Automatic if Bluetooth link broken
 - Using programmable button on radio if manual transfer required
 - No loss of audio even if headset turned off

WIRELESS EARPIECE – GMTN6356A

- Comfortable earpiece design for long shift use
- Loud and clear audio
- VOX (when used with SL4000 series)
- Volume Up/Down controls radio audio
- Built-in microphone includes noise suppression and AVC
 - Reduces background noise
 - Automatic Volume Control adjusts depending on noise level
- Speaker mutes/un-mutes depending on presence of audio transmission
 - Removes any annoying clicking or popping sounds

WIRELESS PTT – NNTN8191B

- **Easy ergonomics**
 - Fits easily in the hand or pocket
 - Lapel clip
 - Large PTT and volume control
- **Audible and visual status indicators**
 - Pairing
 - Bluetooth link
 - Battery status (low and critical)
 - Charging status
- **Fast PTT ensures no audio loss**
- **Activates SL4000's internal mic**
 - When no audio accessory paired
- **Battery life for long shifts**
 - 12 hours typical (5/5/90)
- **Micro USB connector for charging**

SAFETY & CONTROL

- Complete wireless solution
- Easy to pair, easy to use
- Reliable performance
- High quality audio

THANK YOU...

MOTOROLA SOLUTIONS

Before I begin, I'd like to ask a rhetorical question...please reflect on your thoughts during this session.

When you approach a customer regarding their new communication system, do you focus on the radio believing this will address their needs or do you consider their functional needs, environment they operate in and identify solutions utilising the accessory portfolio to enhance their performance, efficiency and safety?

In this session we will cover the bluetooth features of the SL4000 series and the wireless accessories and how they can be combined for new ways to use the SL4000.

- Brief overview of the accessory portfolio
- Deeper dive into the audio related Bluetooth features of the SL4000
- Overview of the Operation Critical Wireless Earpiece
- Overview of the Wireless PTT
- Combinations the Wireless accessories and how they can be used with the SL4000 series.

WIRELESS ACCESSORIES

Liberated from wires...

The image block contains four photographs arranged in a 2x2 grid. The top-left photo shows a control room with multiple computer monitors and a person working. The top-right photo shows a man in a dark suit and blue tie standing in a hallway. The bottom-left photo shows a reception desk with a person standing behind the counter. The bottom-right photo shows the back of a person wearing a dark blue shirt with the word 'SECURITY' printed in white capital letters.

Wireless accessories allow you the freedom to use MOTOTRBO portables in ways not possible before. They liberate you from restraints of wires...

- Freedom to move around a control room...
- Front of office or reception
- Freedom to move in and out of vehicle and effortlessly maintain communication
- Discreet but official portrayal of authority and security

OPERATION CRITICAL WIRELESS PORTFOLIO

	WIRELESS EARPIECE • Exceptional audio for hearing in high noise environments • Very comfortable and secure fit for long shifts • 1 length available for custom fit (30cm) • 12 hours (5/5/90) battery life
	WIRELESS EARBUD – Q2 2012 • Simple, discreet, professional design for businesses • In-line microphone for convenient transmissions in high noise environments • 2 lengths available for custom fit (30cm or 110cm) • 12 hours (5/5/90) battery life
	WIRELESS PTT • Supports both earpiece solutions • Ideal for discrete operations – place in your hand or in your pocket • Wireless PTT solution for commercial Bluetooth headset (HK200 or similar)
	Recommend HK200 or similar commercial Bluetooth Headset • Cost-effective off-the-shelf solution • PTT must be done on radio or with wireless PTT • 8 hours (5/5/90) battery life

We have a growing portfolio of Bluetooth wireless accessories this provides a quick overview – in the next few slides we will go into more details explaining the features and benefits for customers.

WIRELESS BUILT IN

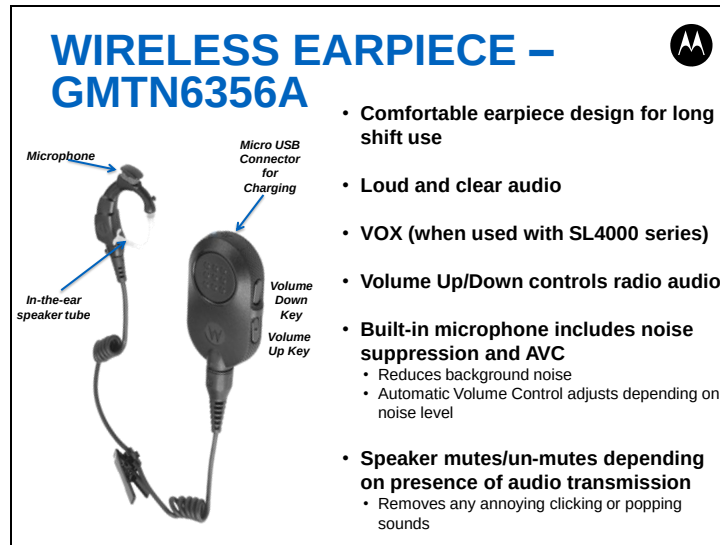

- **Reliable wireless communication**
- **Class II device - upto 10 metre operational range**
- **Intuitive menu pairing procedure**
- **Volume control using radio vol. control or use headset volume buttons.**
- **Easy switching between radio speaker and wireless earpiece**
 - Automatic if Bluetooth link broken
 - Using programmable button on radio if manual transfer required
 - No loss of audio even if headset turned off

SL4000 series is the first PCR portable with built in Bluetooth audio and data wireless. Here we will focus on the audio aspect.

It provides standard Bluetooth 128 bit encryption to provide reliable communication with upto 10 metre range using Class II Bluetooth and has an intuitive menu pairing procedure to pair with Operation Critical Wireless Earpiece, Wireless PTT or standard commercial Bluetooth headsets.

Once paired, using a Bluetooth headset is easy to use. You can change the receive volume on the headset either by using the radio volume up / down buttons, or using the local controls on your Operations Critical Wireless Earpiece or Wireless PTT – it will update the radios volume and reflect this change on the SL4000's display.

Switching between the radio internal speaker and the wireless accessory is also easy. If the Bluetooth link is broken (for example if the user turns off the headset), audio automatically switches back to the radio. - If the user wants to manually switch (for example if a security guard has the earpiece pulled off them) then a button on the radio can be programmed for “Bluetooth Headset Audio Switch” to allow manual switching of received audio between the Bluetooth headset and the radios internal speaker.

The Wireless Earpiece (**March 2012 firmware R01.01.01 download from MOL**) provides a complete solution designed for optimal performance and comfort for long shift use, with loud clear audio.

The SL4000 series supports VOX (Voice Operated Transmit) and Bluetooth combined. Simply enable VOX on your SL4000 and talk using the Wireless Earpiece! The VOX circuit on the SL4000 will detect your voice and initiate your transmission.

Additional convenience of volume change is achieved when you press the Up / Down volume buttons on the Wireless earpiece, the SL4000's volume will track your commands and a visual indication is displayed on the radio.

The wireless earpiece also has a built-in microphone which is designed to give the best possible transmitted audio quality. It includes noise suppression to remove unwanted background noise and also uses Automatic Volume Control to adjust the volume according to the background noise level.

To help remove annoying clicking or popping sounds, the speaker mutes or un-mutes depending on presence of audio transmission

Next, we have the Wireless PTT (**March 2012 firmware R01.01.01 download from MOL**) .

This provides a fast and flexible way to wirelessly connect with any of our earpieces. The PTT is small enough to fit easily in the hand or pocket, but can also be clipped to a lapel for easy access. There is a large PTT button for easy operation and volume controls to adjust the headset audio level.

Whilst in use, the PTT provides audible and visual indications to let you know the status of the Bluetooth link and the battery. The LED on the back will tell you when the battery is getting low or critical and the prominent blue LED signals that your earpiece is pairing or connected.

Another special feature of the Motorola wireless PTT is fast response time. Unlike some competitor's products where there can be a noticeable delay between pressing the button and the radio keying up, the Motorola device has less than 25ms PTT latency to help ensure no audio loss.

Volume change is achieved when you press the Up / Down volume buttons on the Wireless earpiece, the SL4000's volume will track your commands and a visual indication is displayed on the radio.

When paired with the SL4000 series, the wireless PTT can key up the radio and activate the SL4000's internal microphone (**no** audio accessory connected) – allowing new ways to use the radio!

Of course battery life is important and the wireless PTT is designed to last a full shift – typically lasting for 12 hours between charges – and a micro USB charger is provided for easy recharging.

SAFETY & CONTROL

- VOX operation
- SL4000 ONLY

Wireless Earpiece

For Safety & Control of crowds, the SL4000 series can be paired with the Wireless Earpiece for reliable fast communications.

Enable VOX on the SL4000 and operate the radio without touching the PTT button...A steward at an outdoor event can keep the radio under their coat, but still make and receive calls without having to touch the radio.

When a VOX initiated transmission starts the Tx alert tone will be heard and the Green LED will illuminate for the duration of the transmission.

If you are looking to portray an image of security, authority or corporate professional, you can pair a Wireless PTT to the SL4000 series and a Wireless Earpiece, allowing more convenient, discrete functionality and profile to match.

Either hold the Wireless PTT in your hand or keep it in your pocket and initiate transmissions at your convenience – discretely!

Combine a commercially available headset such as the HK200 with a Wireless PTT, allowing you to key up the headset mic without having to touch the radio.

For example a receptionist can move around the reception area, but still use the radio left on their desk.

Covert operations can keep the radio in their shoulder bag, but still make and receive calls without having to touch the radio.

SIMPLICITY - 1

Wireless PTT

- Wireless PTT activates SL4000 internal microphone
- Drop the SL4000 into your shirt pocket – key up using Wireless PTT

Simply drop your SL4000 into your shirt pocket, pair a Wireless PTT to your SL4000 radio and key up the radio activating the internal microphone for convenient hands free talk and listen functions.

For this specific style of use, you may wish to enable the AGC-D (Automatic Gain Control – Digital) feature in the menu (Utilities ->Radio Settings). This will increase the gain of the internal microphone to capture you voice.

SIMPLICITY - 2

Standard Bluetooth Headsets (HK200)

- VOX operation
- SL4000 ONLY
- Complete wireless solution
- Easy to pair, easy to use
- Reliable performance
- High quality audio

You can pair a commercial, off-the-shelf Bluetooth headset to your SL4000 radio for both talk and listen using the SL4000 internal PTT button.

If pressing the PTT is too much, activate VOX on the SL4000 and just talk, your headset will trigger the SL4000 VOX circuit and transmit your voice.
